The 2014 PLDS Report: Characteristics and Trends
by Ian Reid - VP, Subscriber Support, Counting Opinions

The Public Library Data Service (PLDS) is an annual survey conducted by PLA. This 2014 survey of public libraries from the United States and Canada collected fiscal year (FY) 2013 information on finances, resources, service usage, and technology. Each year PLDS includes a special survey highlighting one service area or public library topic. In the 2014 survey, the supplemental questions focused on performance measures.

PLA continues its relationship with Counting Opinions (SQUIRE) Ltd. to provide the service for capturing the data and for the online PLAmetrics subscription service offering access to the longitudinal PLDS data sets going back to FY2002 and data from the Institute of Museums and Library Services (IMLS) going back to FY2000. PLAmetrics provides public libraries real-time access to meaningful and relevant public library data for comparing and assessing their operations using a variety of custom report formats and customizable report templates.

This report presents selected metrics for FY2014 PLDS data and previous year results in tables and charts with related observations. The results in this report were compiled using PLAmetrics. Read the entire article here.

Architect Adam is the hot, eligible playboy in town. He’s known for having new eye candy on his arm at each event he attends – and he’s definitely not looking for anything serious. But it isn’t until he meets gorgeous and successful wedding planner Kerry that he understands what he’s missing in a long term relationship.

Sounds like a move starring Jennifer Lopez and Matthew McConaughey, right? Let me throw something else into the mix — add in the flavor from 50 Shades of Grey, and you’ve got yourself a more compelling and worthwhile read. Read the rest of the review.
